github.com/SWAPY8 Portfolio-Swapnil

Technical Skills

Languages: Java, Python, JavaScript, SQL, HTML5, CSS3

Full-Stack & Cloud Frameworks: React.js, Spring Boot, Node.js, RESTful APIs, Flask

AI & Machine Learning / Integrations: PyTorch, OpenAI API integration, Prompt Engineering, Scikit-learn

Databases & Tools: MySQL, MongoDB, Git, GitHub, VS Code, Kaggle, Swagger, Render

Education

Savitribai Phule Pune University (SPPU) Nov 2022 – Jun 2026
B.E. in Artificial Intelligence & Data Science (CGPA: 8.5/10.00) *Pune, India*

Projects

Agrosphere – AI-Driven Scheme Recommendation System
Tech: React.js, Java, Spring Boot, Python, MySQL, Machine Learning, GitHub 2026

- Developed an end-to-end full-stack portal leveraging a hybrid **Machine Learning eligibility engine** to recommend personalized welfare schemes based on farmer demographic and financial profiles.
- Built and deployed secure REST APIs in **Spring Boot** to orchestrate communication between the React frontend, MySQL database and the Python ML inference service.
- Engineered optimized database indexing, resulting in database query response latency reduction for high-volume transactions.

HireMate AI – Autonomous Recruiting & Mock Interview SaaS
Tech: Python, FastAPI, React.js, Google Gemini API, SQLite, SQLAlchemy, Playwright 2026

- Engineered a scalable full-stack SaaS platform using **FastAPI** and **React.js** to automate resume parsing, ATS match scoring, and interactive interview feedback.
- Architected a stateful chat agent using **Google Gemini API** featuring conversation history context pruning and duplicate question filters to support seamless 8-turn mock interviews.
- Built an automated performance evaluation engine to generate structured JSON scorecards with strengths, missing skills, and personalized roadmap recommendations.
- Configured robust E2E test suites with **Playwright** and designed exponential backoff retry failovers to handle API rate limits dynamically.

PromptPath – Interactive AI Learning Roadmap
Tech: HTML5, CSS3, JavaScript, SVG Animation, Web APIs, GitHub Pages 2026

- Designed and launched an interactive roadmap dashboard visualising 64 progressive prompt engineering topics to help developers learn generative AI orchestration.
- Developed a fast, zero-dependency client-side search engine utilizing DOM manipulation and highlight injection for real-time topic filtering.
- Hosted on GitHub Pages, attracting active views from developers seeking structured learning pathways. 🔗 Demo Link

Experience

Infystent May 2026
AI Software Developer intern *On-site*

- Developed a laundry management web application covering customer, order, pickup, delivery, garment tracking and operational workflows.
- Built and integrated responsive web interfaces with backend services and database-driven functionality.
- Contributed to AI-powered features and workflow automation to improve operational efficiency and customer service.

Achievements & Certifications

- **Hackathon Champion:** Secured **1st Position** among 30+ teams at the Pune Intercollegiate Hackathon by developing **NavEye**, an AI-powered assistive solution designed to help visually impaired individuals with navigation and environmental awareness.
- **Certifications:** Microsoft Certified (Software Development, Cybersecurity Essentials), Udemy (Advanced DSA in Java).
